Regulars

Visitor answers

For the team at the stall. Not a handout.

Uzair Imran · Moiz Hamid
Zain ul Abideen · Ali Hassan

Three things are always true at the stall: everything on screen is sample data, the app is a prototype that is not on sale yet, and a person sends every text; nothing is ever sent from Regulars.

Each answer is two or three plain sentences. Say them at a calm pace, one idea per breath, and let the fact sit. When a number has a source, say the source with it. If a question is not on this page, use the last section.

01 What it is and who it's for

1 **What is it?**
It's Regulars, a dashboard for independent gyms. It follows each new member's first 90 days, shows who is slipping, and lets a coach text them from their own phone. That window matters: 6 in 10 new members are gone by month three (Sperandei et al., 2016).

2 **Who is it for?**
Owners and coaches of independent gyms in the US. The owner sees every new member. Each coach sees only the members assigned to them.

3 **How is that different from the software my gym already has?**
Some gym systems do flag members at risk, often on their bigger plans. Ours is the narrow version: only a new member's first 90 days, one rule anyone can check, and messages from the coach's own phone.

02 How it works

4 **How does a member count as slipping?**
The app counts each new member's visits, week by week, from the day they join. Two finished weeks in a row with fewer than 2 visits each, and they show as slipping. A week with 3 or more visits puts them on the line.

5 **Why 3 visits a week?**
The ones who stay hit 3 visits a week. In a 2001 UK industry study, members who came 3 or more times a week in their first month renewed 78% of the time. Under once a week, it was 59%.

6 **Where does the data come from?**
The owner imports a CSV file of members and check-ins, and checks a preview before anything is saved. Members also check in at a front-desk kiosk with their phone number, no login needed. There are no integrations with other gym software.

7 **Does it text my members?**
No, nothing is ever sent from Regulars. One tap opens a personal text from you or their coach, ready to send: the coach picks a message, can edit it, and chooses Text message or WhatsApp. The nudge is recorded, and marked Came back if the member visits within 7 days.

8 **Is there AI in it?**
No. The app counts visits per week and applies fixed rules, so you can always see why someone shows as slipping. A person decides who to text and what to say.

03 Data and privacy

9 **Where is the member data kept?**
The honest answer includes "we don't know yet".
In this demo, everything lives on this laptop, in one database file. The app doesn't use the internet here; the phones reach the laptop over a local Wi-Fi network. Where a real gym's data would live is a decision we haven't made.

10 **Who can see it, and is it secure?**
The owner sees every member; a coach sees only their own, and the server checks that on every request. Passwords are stored as hashes, not as text. We have no security certification; this is a prototype.

04 Price and availability

11 **What does it cost?**
The plan we'd test: a free 90-day pilot, then $99 a month per gym. Not on sale yet. One flat price. Unlimited members. Most US members pay under $50 a month (Health & Fitness Association). Keep 2 members a month, and from the second month it pays for itself.

12 **Can I use it at my gym? When does it launch?**
The honest answer is "we don't know yet".
Not today. It's a prototype built for this expo, so nothing is on sale yet, and there is no sign-up today and no launch date. What comes after the expo, we haven't decided.

05 The project

13 **Is Northside Strength a real gym?**
No. Northside Strength is sample data, and every member and coach on screen is made up. The app itself is real: accounts, a database, CSV import, the kiosk and live updates, all running on this laptop.

14 **Does it work? Has a gym used it?**
The honest answer is "we don't know yet".
We don't know yet. No gym has used Regulars, so we can't say it keeps members. The numbers we quote describe gyms in general, not Regulars.

15 **Who built it?**
Four of us: Uzair Imran, Moiz Hamid, Zain ul Abideen and Ali Hassan. We built the prototype for this expo, and the name, Regulars, is a working name.

06 If you don't know

Questions outside this page get one of these. Don't guess, and don't promise a feature, a date or a price.

- "Good question. We haven't worked that out, and I'd rather not guess."
- "That isn't in the prototype. Here is what it does today." Then show the closest screen.
- "I don't have a figure for that. The numbers we use are on the brochure, each with its source."
